

CRM Enterprise Software Design Specification (Master Plan)

This document defines the structure for an enterprise-grade Software Design Specification (SDS) intended to guide AI-assisted development with Claude Code. Rather than a single monolithic document, the SDS should be maintained as a collection of linked Markdown documents under version control.

Volume 1 – Business Architecture

Contents:

- Executive Summary
- Business Vision
- Business Goals & KPIs
- Personas
- Business Capabilities
- Business Processes (BPMN/Mermaid)
- Use Cases
- Glossary

Volume 2 – Product Design

Contents:

- Information Architecture
- Navigation
- UX Principles
- User Flows
- Wireframes
- Screen Inventory
- Design Tokens

Volume 3 – Technical Architecture

Contents:

- System Context
- Component Diagram
- Deployment Architecture
- Technology Stack
- Security
- Scalability
- Observability

Volume 4 – Data Architecture

Contents:

- Domain Model

- ER Diagram
- Database Dictionary
- PostgreSQL Schema
- Prisma Models
- Seed Data
- Migration Strategy

Volume 5 – API Architecture

Contents:

- REST Standards
- Authentication
- Endpoint Catalogue
- Request/Response Contracts
- Error Catalogue
- Versioning

Volume 6 – Module Specifications

Contents:

- Authentication
- Dashboard
- Users
- Leads
- Visits
- Customers
- Products
- Orders
- Invoices
- Payments
- Reports
- Notifications
- Settings

Volume 7 – Engineering

Contents:

- Backend
- Frontend
- Mobile
- RBAC
- UI Components
- Coding Standards

- Testing
- CI/CD
- Monitoring

Volume 8 – AI Development Playbook

Contents:

- Claude Project Rules
- Prompt Templates
- Sprint Plan
- Definition of Done
- Code Review Checklist
- Release Checklist

Recommended Repository Structure

docs/ sds/ volume-1-business/ volume-2-product/ volume-3-technical/ volume-4-data/ volume-5-api/ volume-6-modules/ volume-7-engineering/ volume-8-ai-playbook/ Each chapter should be maintained as Markdown and treated as the authoritative specification.

Implementation Recommendation

Develop one module at a time. For each module complete: UX → Database → API → Backend → Frontend → Mobile → Tests → Documentation. Do not proceed until the current module satisfies the Definition of Done.
